

QUERCUS Multistrategy FIZ

July 2022

Investor's Profile

The Fund is addressed to the Investors: seeking potential benefits that exceed the income from investing in balanced funds; seeking opportunities for asset diversification; with an investment horizon of minimum 5 years; aware of the investment risks associated with the fund's investment policy.

The Fund's aim and strategy

The aim of the Fund is to achieve positive average annual returns in longer term, regardless of the situation on the financial markets. Due to flexible investment policy, the returns should not be highly correlated with changes of the market indices.

The Fund's strategy:

- finding opportunities among undervalued assets by taking long position,
- finding opportunities among overvalued assets by taking short position,
- the investment process is based on the fundamental analysis,
- investments are done in Poland and in specific assets on the global markets.

The Fund pursues its investment policy by investing assets flexibly, both in equities (from 0 to 100% of assets), as well as debt and other instruments – a wide range of instruments can be used which are out of the reach for open-end funds. The Fund's assets are invested mainly in: equities listed on the WSE, other stock markets of CEE region and other markets; equities in pre-IPO; debt instruments, including corporate bonds issued by public companies; currencies; units of other funds; derivatives like futures or options on stock indices, debt instruments, metals or other commodities.

The purpose using derivatives is to limit volatility of the certificates' value (hedging) or to get exposure to specific asset class (investment aim).
